www.github.com/miguemartelo

Passionate about web development and oriented to work with frontend technologies. I'm constantly looking for learning opportunities and professional growth with the ability to adapt to change and work with cross-functional teams.

WORK EXPERIENCE

Sr Software Engineer Consultant

Gorilla Logic - 2024 – current

- **SafeRide Health Client**
 - Fullstack development on a multi-service NEMT platform: PHP (Laravel/Lumen), Node, React, and Deno/TypeScript across legacy monoliths and new microservices (member, ride, billing, user, ATMS).
 - Owned the local Docker setup: unified Compose stack, per-service env config, scripts for orchestration and DB seeding, and nginx-proxy virtual-host routing for 15+ services.
- **Carnow Client**
 - Implement themes based on the selection of the client using CSS overrides with SASS
 - Use the useContext of React to identify the themes
 - Help the team improve the client's platform

Technologies: ReactJS, NextJS, React-Query, React-Hook-Form, Jest, Testing-Library, SASS, Docker, PHP/Laravel, Node.js, Deno, TypeScript, microservices, API gateway, MySQL, MongoDB, Redis, nginx, healthcare.

Sr Software Engineer UI

Appgate - 2021 – 2024

- Built web applications to allow the customer to easily deploy new services without the need to contact customer support.
- Proposed and implemented the use of TypeScript within the project and refactored untyped code.
- Improved data fetching using react-query to manage API requests and automatic caching to improve performance
- Implemented MSW to improve unit test coverage of network-specific code.

Technologies: ReactJS, NextJS, React-Query, React-Hook-Form, Jest, Testing-Library, MSW, SASS.

Web UI Developer

Globant - 2020 – 2021

- DirectvGo: Improved user experience within the app with features to allow users to more easily find content from within the application.
- DirectvGo: Identified a performance issue where some components were doing re-renders unnecessarily, solved this issue implementing useMemo and useCallback to avoid the re-renders in the components where they aren't needed.
- To connect the TVs with the UI I needed to create a script with NodeJS where the script identified the tv connection and sent the application to execute on it.

Technologies: ReactJS, Redux, Redux-Saga, Jest, Testing-Library, SASS, and NodeJS.

Frontend Developer

S4N - 2019 – 2020

- Developed an internal platform to optimize the onboarding process for new employees.
- Use Node.js to implement a script to connect the DB of an external backend with the application.

Technologies: Reactjs, React Context, Javascript Vanilla, SASS, and NodeJS.

Technological Leader

Universidad Tecnologica de Bolivar - 2017 – 2019

- Developed an application to have a register of the talks and congress where the teachers gone, every teacher had the possibility to register talks, and the dean of every faculty can see this register to have a control of this.
- Administered a virtual courses platform, used PHP to add new full-stack features, server administration to update the platform every 6 months, and DBA work via MySQL.

Software Developer I

Zeus Tecnología - 2016 – 2017

- Developed a platform to administrate the progress of internal projects using Javascript, JQuery, C#, and SQL Server.

EDUCATION

SYSTEMS ENGINEER

Universidad Tecnológica de Bolívar

2013
